Exon Labs

A technology center for the development
of decentralized solutions and products

Who we are

Exon Labs is a collective providing high quality technical service and smart human resource allocation to the builders of the next generation of the Internet.

Our services

Our team offers its customers a full range of personalized technical services to enable them to thrive in the complex decentralized digital environment of the future.

Protocols

Integrating cryptographic protocols as an architectural foundation of the implementation of custom distributed systems.

Dapps

Developing smart contracts based applications of various types with support of necessity special functional features and details.

General modules &
components

Incentives systems
& solutions

Dapps

Trading platforms &
interfaces

Custom dapps and
smart contracts

General modules & components

The core components and functionality of decentralized finance (DeFi) products and services.

- Automated Smart Contracts
- Decentralized governance models
- Tokenization
- Digital asset custody and storage
- Decentralized interfaces
- Digital identification
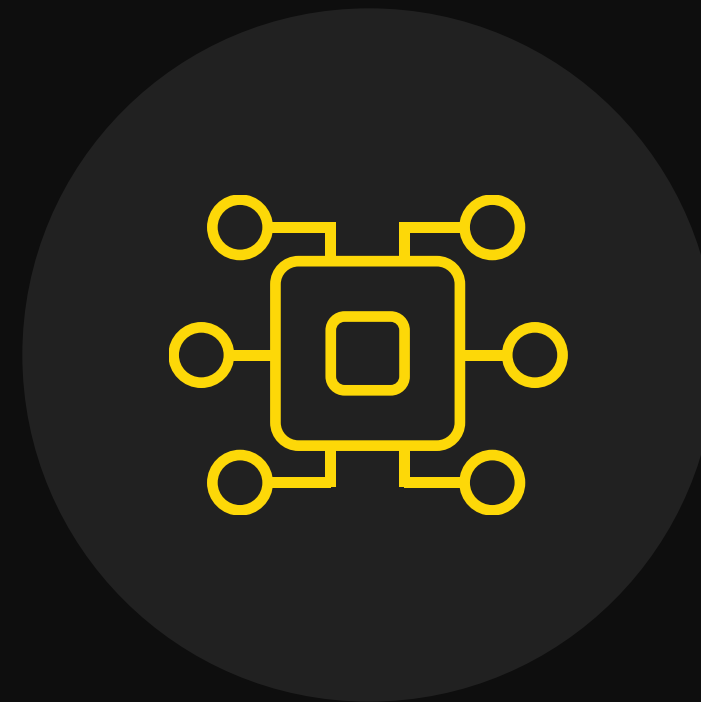

Trading platforms & interfaces

Decentralized financial products to securely access, trade, and manage cryptoassets.

- Automated Market Makers
- Liquidity mechanics
- Swaps
- Launchpads
- Launchpools
- Liquidity tokens
- IDOs

Incentives systems & solutions

Set of functionality for leveraging smart contracts, tokenized assets, and decentralized protocols to safely and securely access new sources of liquidity and yield.

- Decentralized leaderboards
- Staking and loyalty rewards
- Specific gameplay scenarios
- Automated yield farming
- Airdrops

Custom decentralized applications and smart contracts

On demand distributed solutions & products for various cases and scenarios.

- Payments
- Logistics
- Voting
- Insurance
- Gaming
- Media & entertainment
- Identity management
- DAOs
- Other type solutions with on demand functionality

Digital assets

Creating digital assets, developing algorithms and rules for their implementation, release, and use.

Governance assets

NFTs

Custom functional assets

Tokenization

Security assets

Utility assets

Focus

We immerse ourselves in every aspect of keeping the whole picture and standardizing creativity.

Agility

Flexibility in the organization of the workflow allows you to quickly respond and find the best solution in the face of changing circumstances.
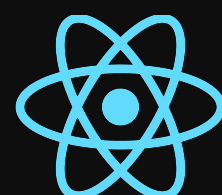

Preciseness

The concentration of production efforts is aimed at achieving the result of the final product in accordance with the expected result.
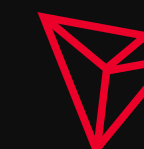

Logicality

Verifiability and traceability of every effort at every step of execution.
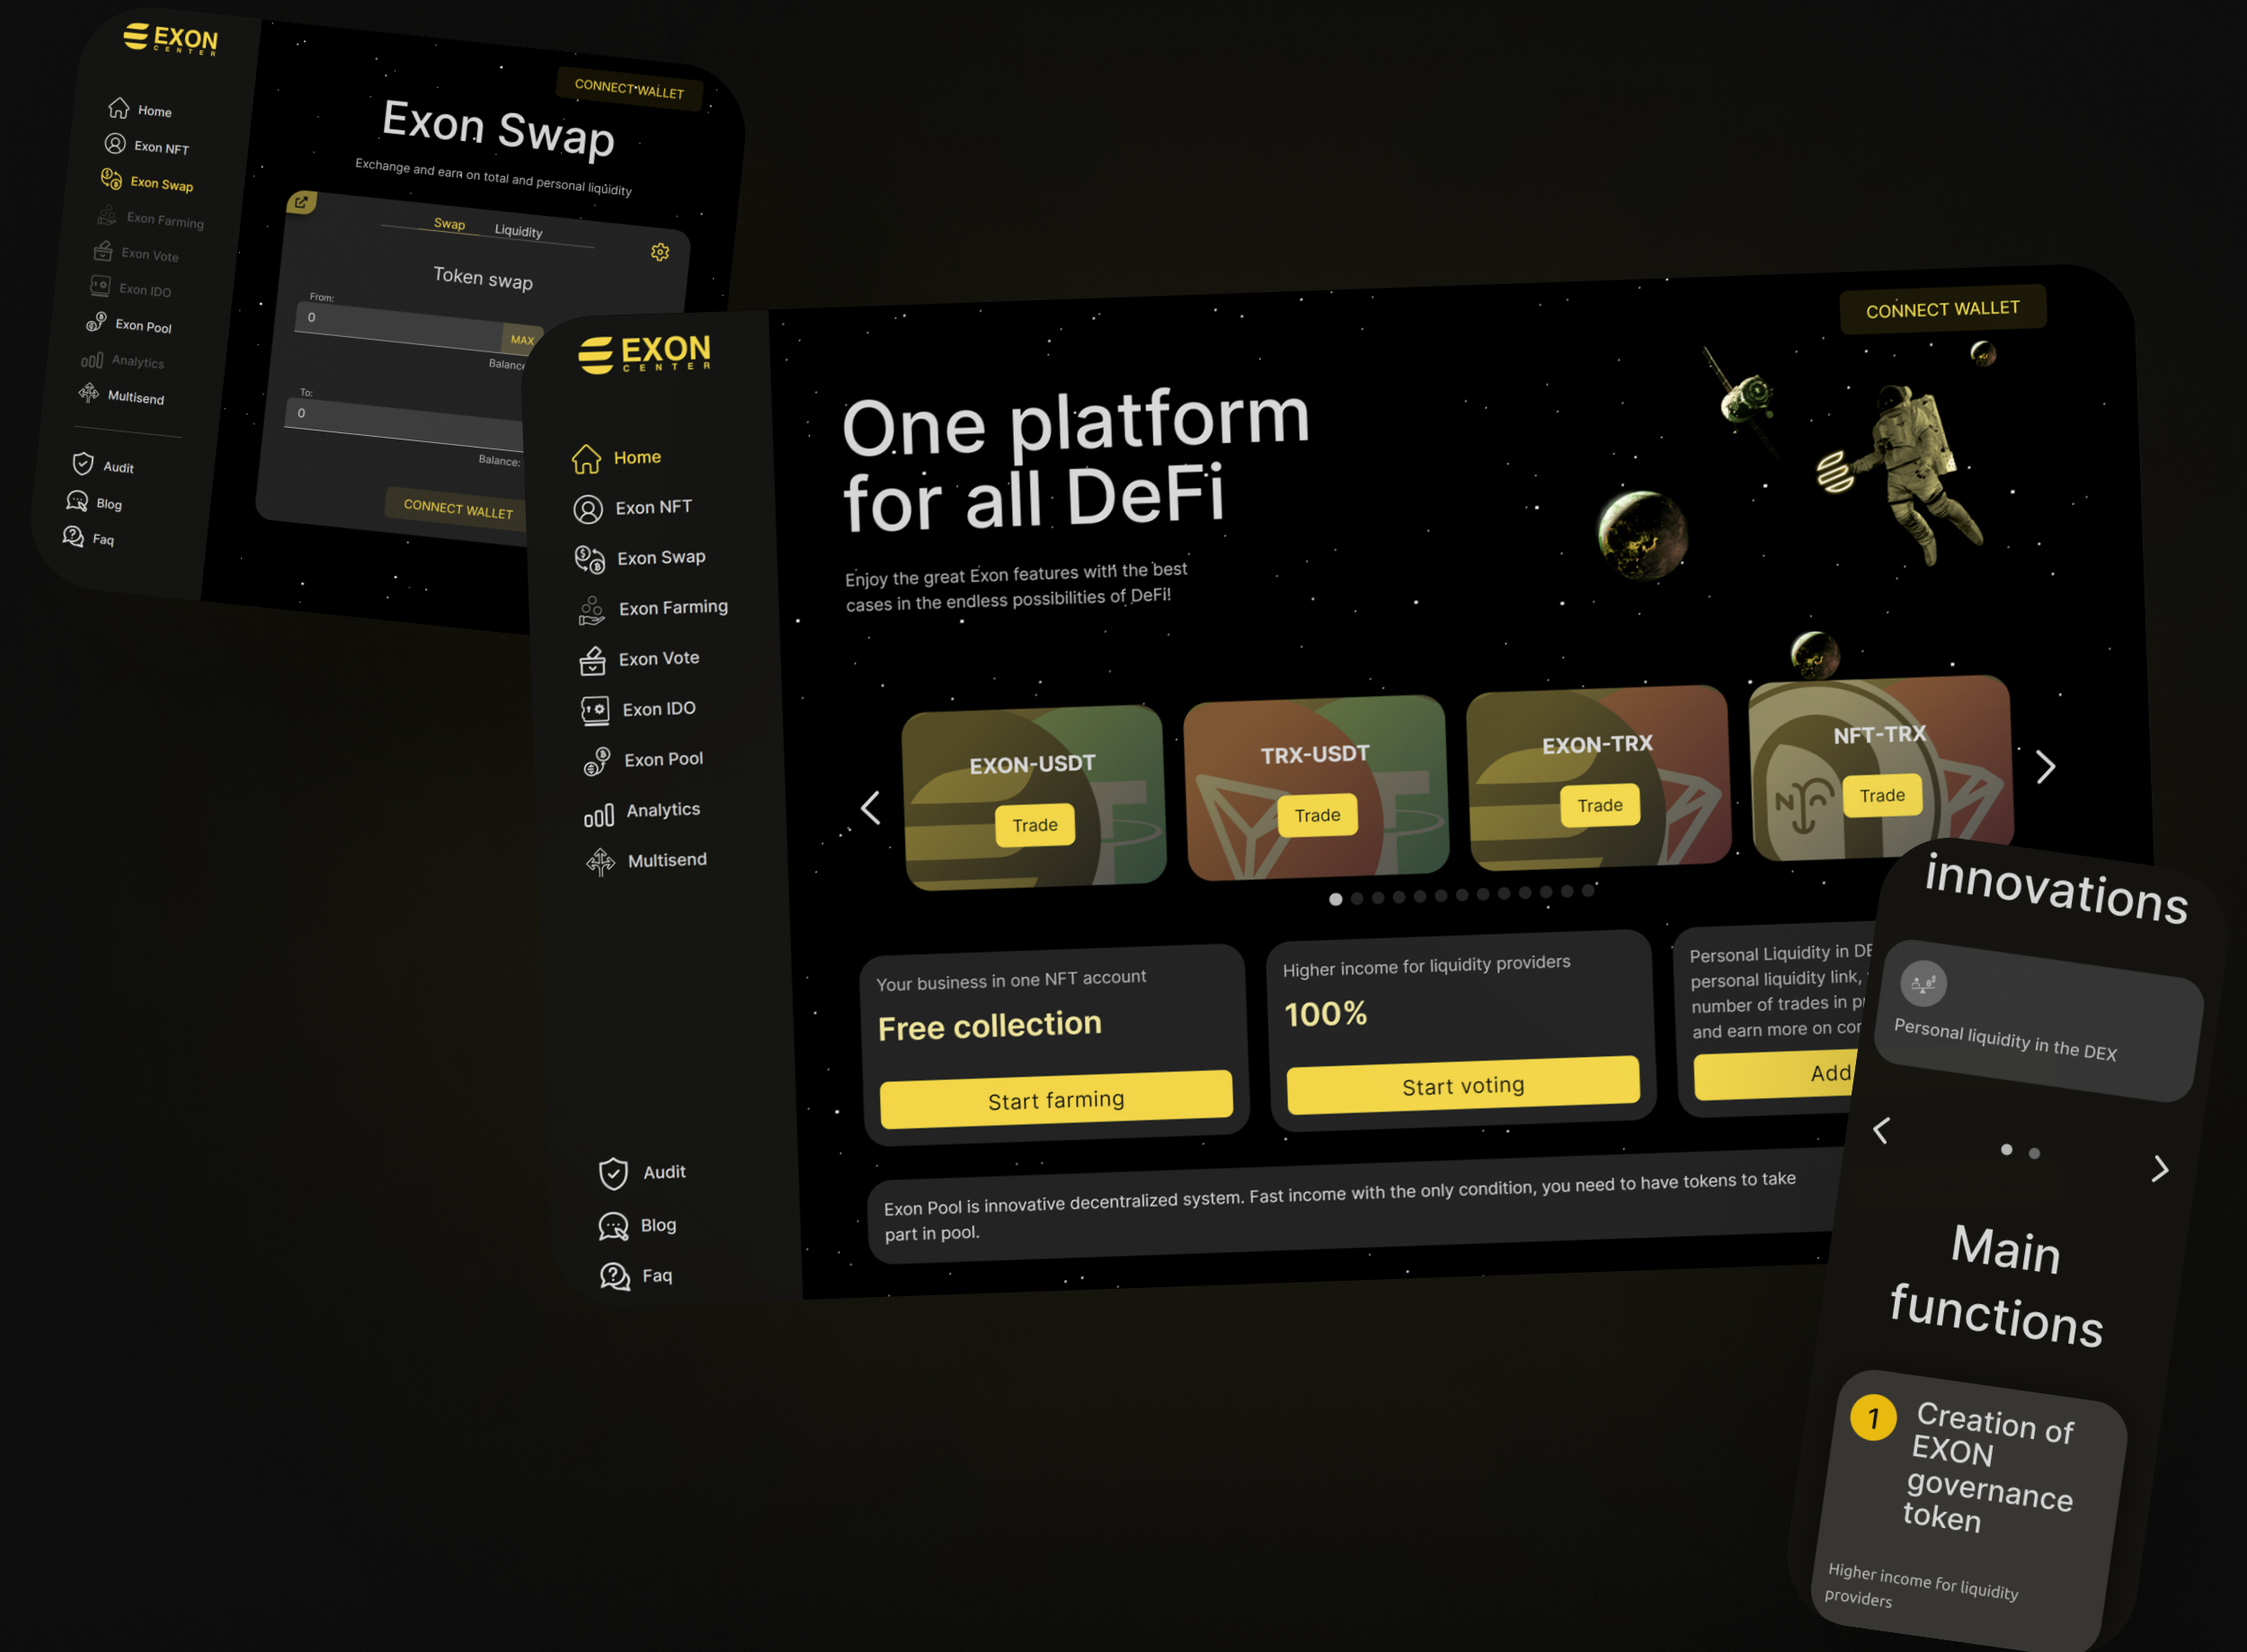

Toolset

Our work

Some of the projects we have recently worked on.

Exon Center

DeFi platform with market-leading functionality.
Exclusive DEX with personal liquidity.

Holograph App

Holograph App enables creators to create, deploy, mint, and sell multichain collections with no coding experience required. Launch your collections for free on any network in just a few simple clicks.

LEARN MORE

Multichain Support

Holograph enables digital collectibles to move between networks with complete data integrity. Holograph will expand to support to a variety of execution environments.

UNVEST

Unvest

Free crypto tools for teams. Set up custom vesting. Sell locked tokens. Lock liquidity. Batch airdrop/send tokens. Works on Ethereum, BSC, Polygon and Avalanche.

unvest.io

Unvest's smart contracts are battle-tested, securing billions of mainnet tokens, every single day.

VESTING   LIQUIDITY LOCKS   AIRDROP   CHAIN SUPPORT   SECURITY

Custom vesting, free for teams

A free, self-service vesting platform with custom release schedules for teams and holders.

Everything is self-service and permissionless. Enter your ideal vesting terms, with support for linear vesting, instalments, multiple rounds, varying schedules, and more.

OPEN VESTING APP →
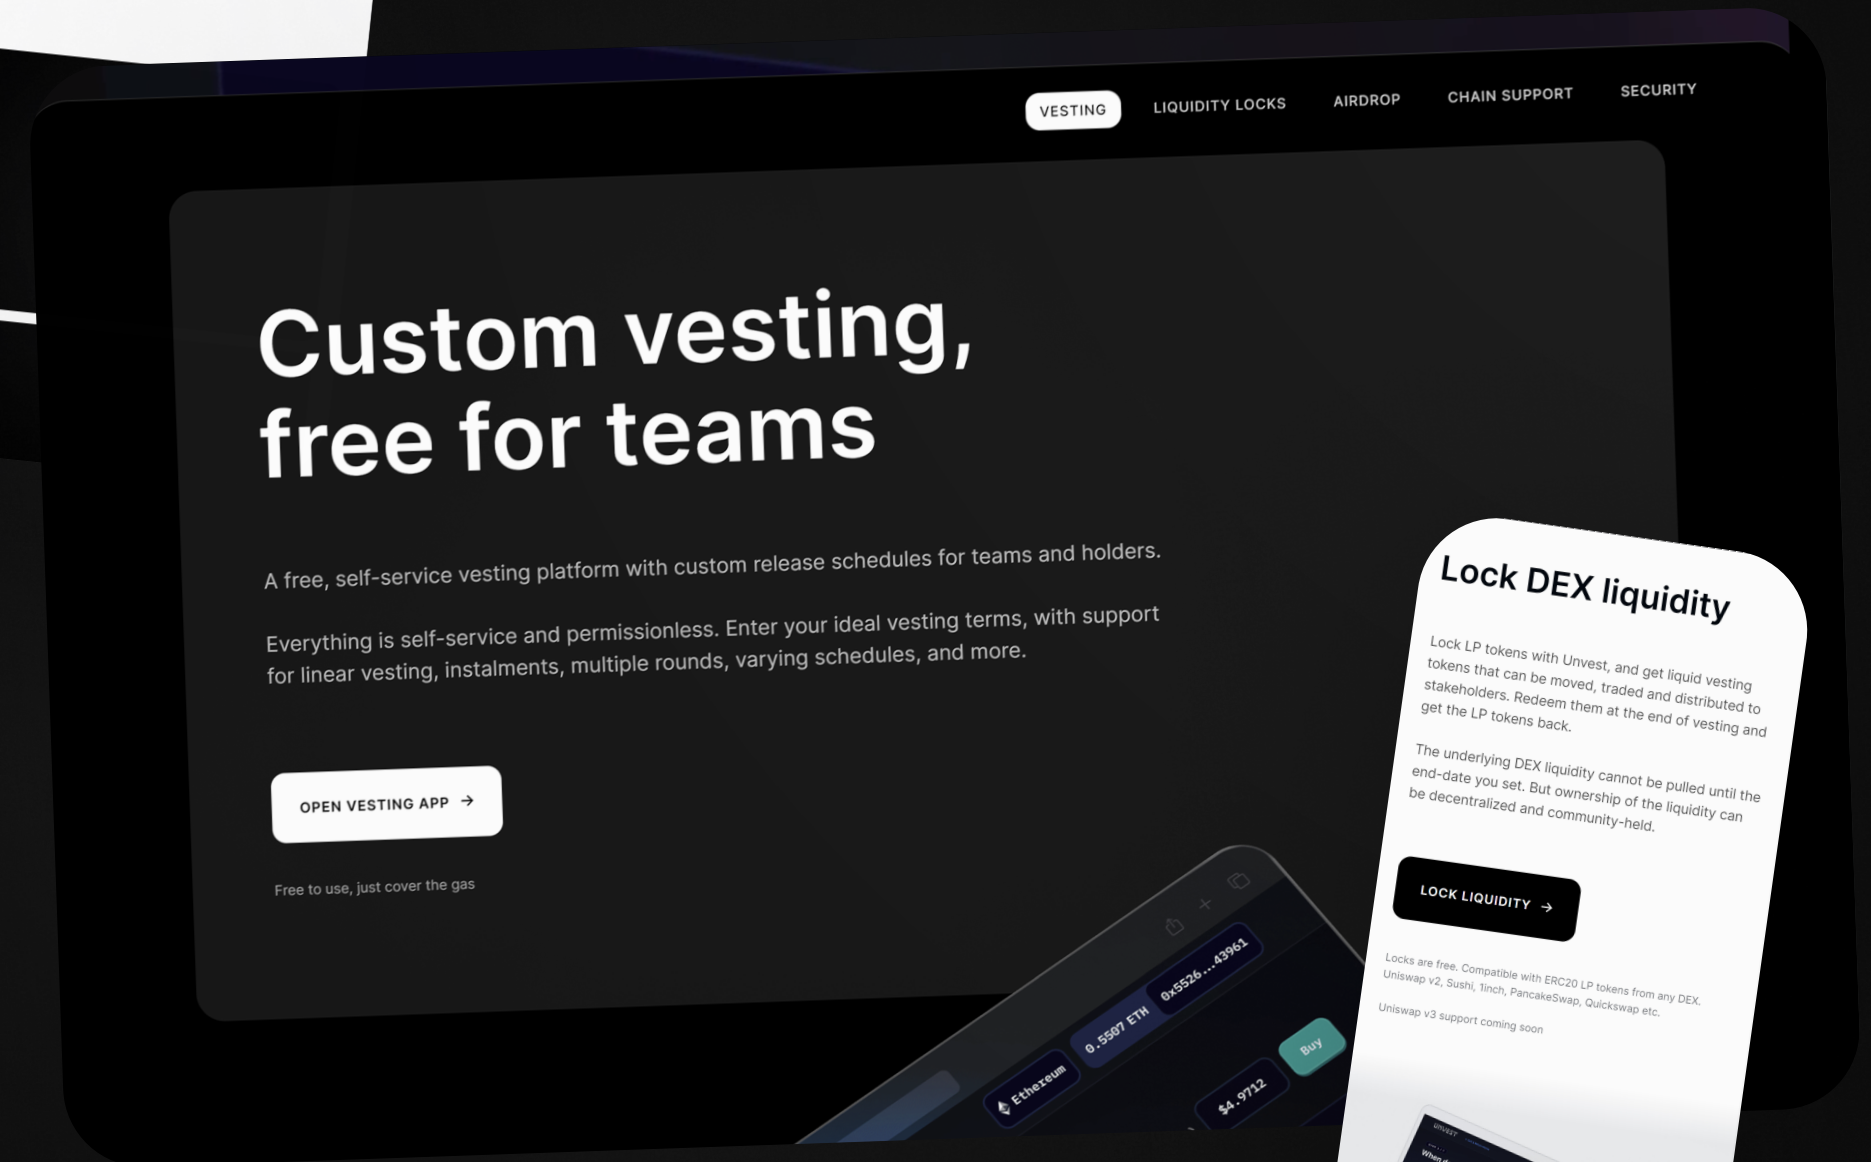

Free to use, just cover the gas

Lock DEX liquidity

Lock LP tokens with Unvest, and get liquid vesting tokens that can be moved, traded and distributed to stakeholders. Redeem them at the end of vesting and get the LP tokens back.

The underlying DEX liquidity cannot be pulled until the end-date you set. But ownership of the liquidity can be decentralized and community-held.

LOCK LIQUIDITY →

Locks are free. Compatible with ERC20 LP tokens from any DEX. Uniswap v2, Sushi, 1inch, Pancakeswap, Quickswap etc.

Uniswap v3 support coming soon
